

Visual Changelog — HAnim LOA5 Demonstration

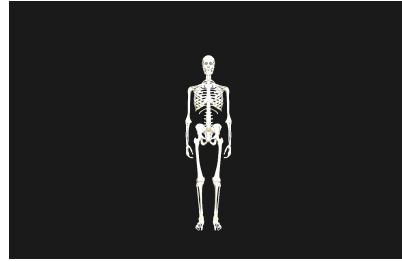

How the running figure and classroom skeleton evolved. Each panel is a verified render; commit ids let you check out that exact state in git.

1. The runner

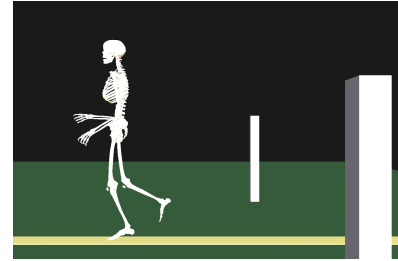

a) Generated stick figure (LOA-4). Real HAnim joints, our gait, gait synced to ground speed.

b1a4541

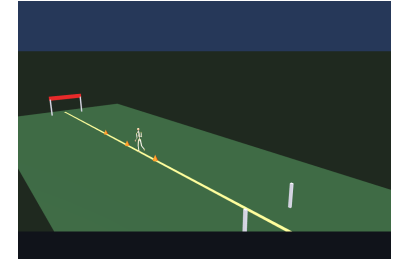

b) Canonical LOA5 skeleton. The Web3D AllBonesLOA5 figure: 150 joints, 243 bone meshes.

47ffc4f

c) Bone-mesh runner. The real skeleton runs the slalom course, driven through standard joints.

47ffc4f

d) Browser delivery (X_ITE). The real HAnim scene in a web player—no flattening.

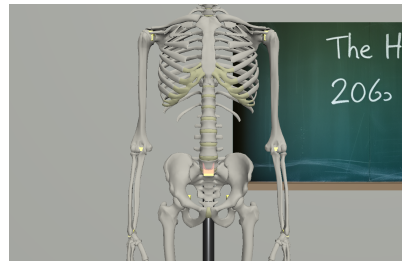

0259f0c

2. The classroom

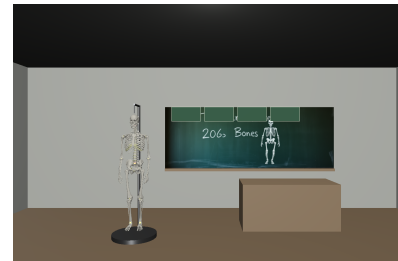

e) Generated textures. Chalkboard & posters made locally with FLUX.1, applied as ImageTexture.

132cb9d

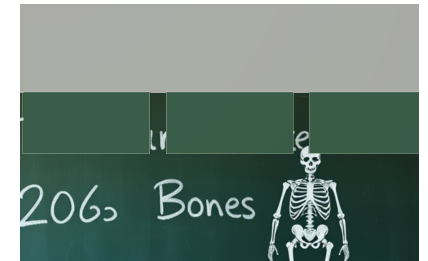

f) PBR look-dev. Bone meshes re-authored to PhysicalMaterial; form returns under IBL.

a05e930

g) Interactive classroom. LOA5 skeleton on a stand; chalkboard buttons switch Walk/Run/Jump.

b26a291

h) Chalk-styled controls. Buttons restyled to read as chalk drawings on the board.
